

New Product

EXPO **ExpoLight**™

An ExpoDisplays Product

IMPACT! That's what exhibitors will get from our newest product, ExpoLight. This durable, lightweight, portable/modular system offers a unique alternative to pop-ups, without increased assembly time or shipping costs. ExpoLight's aluminum framework is used to easily create large, open modules. The key feature of ExpoLight is that each module is seamless, allowing the use of large, fully backlit panels. ExpoLight floor modules stand 92" tall (to match ExpoModular and ExpoAire II) in widths of 22.5", 34.5" and 45". Configuring the modules in a stair-step fashion allows an endless array of visual presentation possibilities. Other features include "no tools required" easy assembly and a lifetime warranty on the frame. ExpoLight packs easily into wheeled shipping cases for FedEx® and UPS® shipping.

ExpoLight modules may be combined with or added to other ExpoDisplays product lines to bring large, powerful backlit graphics to an exhibit. And finally, our in-house ExpoGraphics team has the technology to produce high quality graphics for your ExpoLight. Call today to find out more about ExpoLight!
