

exhibit development group

ExpoModular offers the look of a custom exhibit in a lighter, easier to reconfigure format. The secret is the ExpoModular panel—a lightweight, aluminum frame covered both sides with laminate or fabric. These pre-formed flat and curved panels, available in hundreds of fabric and laminate finishes, are used as the building blocks.

ExpoModular panels connect (without tools) to create frameless and virtually seamless walls, towers, counters, computer workstations and more for a limitless number of structures and configurations. With a large collection of standard shapes and sizes to choose from, our design staff can create an exhibit with the look you want and the features you require, no matter how demanding your trade show needs.

One of the most versatile exhibit systems available, ExpoModular is a durable, attractive and user-friendly alternative to custom trade show exhibits.
